

# UpFront

Eight-foot cross grained panels allow cabinet and fixture makers to span longer runs of vertically grained hardwood surfaces without joinery. States' UpFront cross grain panels are available in most popular wood species and may be ordered unfinished or prefinished with NOVA clear finishes.

FSC Certified and no-added-formaldehyde constructions are also available. Substrates include hardwood veneer, softwood veneer, particleboard,

MDF and ArmorCore. Thicknesses run from 5/32" to 1-1/2." All UpFront panels conform to ANSI/HPVA HP-1-2004 Standards for Hardwood and Decorative Plywood.

Eight-foot Cross Grained Panels  
Span Longer Runs Without Joinery.

CROSS GRAINED HARDWOOD PLYWOOD PANELS

Ingenuity, It's in everything we do.

*States Industries offer most domestic hardwood species in 8' X 4' counterfront, or cross grain configurations. UPFRONT panels are useful where longer horizontal runs of vertically grained woods are specified, such as kitchen islands and counter fronts. Using 8' cross grain panels eliminates the need for the joint created when panels with conventional grain orientation are cut and rejoined to create long cross grained surfaces.*

## Thickness and Core Constructions

UPFRONT panels are available in thicknesses from 5/32" through 1 1/2" to HPVA standards. Cores include Luan, Fir veneer, MDF, Particleboard and ArmorCore®. Not all cores are available in all thicknesses. Cross Grain panels are 96" X 48" or optionally oversized and are fully sanded.

## NOVA® Prefinishing

States' UPFRONT cross grained panels can be supplied with our trademarked NOVA® finishes. Currently prefinishing is limited to clear coatings. We are working to add NOVA® color finishing capabilities to this product category in the future.

## Applications

UPFRONT panels are frequently used in constructing kitchen islands where broad spans of vertically grained woods are specified. They may also be used to face reception counters or store fixtures, as well as in wainscotted wall panels. UPFRONT panels provide a seamless vertically grained surface on spans up to eight feet wide.

## Environmental Options

UPFRONT panels are available in CARB compliant and No-Added-Formaldehyde configurations, as well as FSC or SFI certified.
